

I had problems installing psycogp2 and didn't want to mess up my computer without knowing the installs weren't going to cause a problem. Here's the SQL and Excel below.

```
select t.Title, count(*) as TitleCount, sum(Salary)/count(*) as AvgSalary
from employees as e
join titles as t
on e.EmpNo = t.EmpNo
and t.ToDate = '9999-01-01'
join salaries s
on e.EmpNo = s.EmpNo
group by t.Title
order by sum(Salary)/count(*) desc
```

Title	Count	Avg Salary
Senior Staff	82024	\$ 58,511.96
Staff	25526	\$ 58,448.92
Manager	9	\$ 49,600.55
Technique Leader	12055	\$ 48,532.83
Engineer	30983	\$ 48,532.42
Senior Engineer	85939	\$ 48,501.99
Assistant Engineer	3588	\$ 48,436.85

Salaries are all pretty similar with the staff and senior staff making more than the technical staff and managers.
